

System Requirements:

- Windows® XP Home, XP Professional, Vista (All Versions)
- CD or DVD drive
- 1 GB of available hard disk space
- 128 MB of RAM
- Internet connection
- NTFS file system (Smart Restart will NOT work with FAT32 file systems)
- Half of the hard drive free space must be larger than the space used by user profiles.

Smart Restart™

RESTART TO A PERFECT COMPUTER

Smart Restart is the next generation of PC protection. Unlike the security suites, Smart Restart is a proactive security solution allowing for complete protection of your PC while still giving full control over the system's security. By literally "write protecting" the hard drive, Smart Restart prevents any changes to the hard drive. With a simple restart all malware is deleted from your computer. This means that no matter how new or vicious the virus, or how invasive the spyware, no permanent damage can be done to your computer.

With Smart Restart it's like a brand new computer every time you restart.

It's like a brand new computer every time you restart.

Smart

With Smart Restart all viruses and other malware are gone when you restart your computer. However, all your Word docs, emails, pictures, music, favorites, desktop settings and shortcuts are all saved so you can use or update them at any time.

Safe

Unlike other computer security products, our design allows you to surf the internet, download files, and make potentially problematic changes to your computer without the fear of permanent damage.

Protection

Smart Restart kills dangerous malware such as viruses, spyware, keyloggers, worms, adware and Trojan horses, with a restart. It protects your computer from slowing down to an annoying crawl.

Cost Effective

Smart Restart is a one time purchase. Because Smart Restart is proactive instead of reactive, daily updates are not required, all unwanted changes are eliminated with a reboot. There is NO ANNUAL RENEWAL FEE.

SOFTWARE FEATURES:	SMART RESTART	ANTIVIRUS	SPYWARE
Write Protects the Hard Drive	✓		
Kills Known Viruses	✓	✓	
Kills Unknown (Zero day) Viruses	✓		
Kills Spyware & Adware	✓		✓
Kills Keyloggers	✓		✓
Reduces Identity Theft	✓	✓	✓
Eliminates Internet Threats	✓		
No Annual Renewal Fees	✓		
No Daily Updates	✓		
Eliminates All Threats on Restart	✓		

NOTE: Smart Restart will not work in a RAID configuration or on dynamic disks. You must have your disk configured to "Basic." You must also have a basic understanding of Windows. If you feel uncomfortable with installing and configuring your system, we recommend that you have a qualified computer services technician install Smart Restart.

Once Smart Restart is installed, from that point on viruses and other malware that infect your computer will be removed every time you restart. Smart Restart will NOT remove viruses or other malicious code already present on your computer. You may find it useful to clean your computer of any malware before installing Smart Restart. Once you are using Smart Restart, we recommend that you restart your computer regularly to remove any threats that may have come in since your last restart. With Smart Restart it's like you have a brand new computer every time you restart!

Kills Viruses • Kills Spyware

Fail-Safe Protection With Every Restart

Security software that:

- ✓ Kills viruses, spyware, and all other malware
- ✓ Eliminates the fear of downloading dangerous files
- ✓ Allows you to keep important files safe and secure
- ✓ Prevents others from harming your computer

It's like a brand new computer every time you restart.

Intelligent Design

Smart Restart uses a unique zoned architecture to manage and protect your entire personal computer. The **Protected Zone*** is like a vault where you permanently store and protect important files from modifications and accidental deletions. The **Keep Zone**** is a collection of folders where active working files like photos, music, movies, e-mail, Word documents, etc. are stored. The **Temporary Zone***** is like a dumping ground for all other files (known and unknown). Malicious files temporarily reside in this zone, but will be erased when you restart your computer.

*Protected Zone

- ✓ Install Software Permanently
- ✓ Keep Important Non-Active Files
- ✓ Store Files That Won't Change
- ✓ Save System Settings

**Keep Zone

- ✓ Receive & Store E-mails
- ✓ Keep Active Working Files
- ✓ Store Files That May Change
- ✓ Save Most User Settings

***Temporary Zone

- ✓ Direct Files Downloaded By Others
- ✓ Put Unimportant Files
- ✓ Route Unknown Files
- ✓ Send Dangerous Malware
